RED HAT NETWORK SATELLITE IMPLEMENTATION

STANDARDIZE AND START SAVING ON YOUR MAINTENANCE COSTS SOONER

WHAT IS IT?

In a short-term[1] consulting engagement, the Red Hat Network Satellite Implementation installs, configures, and integrates a Red Hat Network Satellite Server in your IT environment.

WHAT DOES IT DO?

A Red Hat consultant will come to your site and deploy a Red Hat Network Satellite Server into your IT environment. In the course of this consulting engagement, your system administrators will be trained on the job, which accelerates time to value, helps reduce risks, and enables you to refocus your IT resources. The competence and experience of our consultants ensures a stable, consistently available IT infrastructure after the deployment, which is configured and optimized for your particular needs.

WHY SHOULD I CARE?

Red Hat Network Satellite provides the entire functionality of the Red Hat Network (RHN) behind your firewalls, enabling premium system management with maximum control, security, and flexibility. This significantly enhances the security of your local network and of your computer systems without depriving you of the comfortable, flexible, web-based system management and provisioning functionality provided by RHN. In addition, RHN provides the ability to manage virtual instances of Red Hat Enterprise Linux and provides tools to manage your configuration files in a centralized and efficient manner.

Since only the Satellite Server will connect to the public Internet in order to download updates (other update methods are available), you will also save network bandwidth.

[1] This is a time and materials engagement. The exact hours and time required depend on the complexity of your environment.

WHAT DO I GET?

- A Red Hat Network Satellite Server optimized for your specific environment
- Comprehensive Red Hat Network Satellite configuration documentation
- Knowledge transfer

SCOPE

A Red Hat consultant will assist you with:

- Installing and configuring Red Hat Enterprise Linux and Red Hat Network Satellite Server
- Integrating third-party applications with Red Hat
- Network Satellite
- Learning how your Red Hat Network Satellite Server addresses your server management needs
- Knowledge transfer
- Documentation

PLAN OUTLINE

1. Install and configure a Red Hat Enterprise Linux system and Red Hat Network Satellite.
2. Populate RHN Satellite with appropriate Red Hat and third-party software.
3. Configure additional third-party applications.
4. Demonstrate using the RHN Satellite Server.

REQUIREMENTS

To ensure a smooth service delivery, the following people from your organization should be available to work with the consultant during the engagement:

- Sponsor: This person provides guidance and an escalation point, should one be necessary and is your ultimate sign-off authority for fixed-price consulting engagements.

- Project manager: This person manages your day-to-day activities related to the engagement and ensures the timely delivery of information required for the project.

- IT and other staff: These people are your IT and other professionals who provide Red Hat with the relevant and necessary information about your IT infrastructure.

The following technical requirements should be met prior to the start of the engagement[2]:

- Certified hardware to run Red Hat Enterprise Linux

- Valid Red Hat Network Satellite Management entitlements for all systems to be managed

- A valid Red Hat Network Satellite entitlement

---

2 Clients may need to satisfy a more detailed checklist with Red Hat requirements prior to commencement of an engagement.
